Buddy Williams

AI Leadership and Technical Strategy

Atlanta, GA | buddywilliams@gmail.com

LinkedIn | GitHub | Writing and portfolio

Summary

Technical executive and hands-on engineer with more than 20 years delivering software across insurance, healthcare, enterprise collaboration, logistics, and media. Combines AI strategy, software architecture, customer discovery, delivery leadership, and production engineering. Builds agent orchestration, retrieval, and verification systems that turn emerging AI capabilities into practical tools. Experience spans founding companies, leading platform development, and owning customer engagements from sales through deployment.

Experience

Insurity | VP, Forward Deployed Engineer

September 2026 to Present

Nevo Technologies | Chief AI Innovation Officer

March 2025 to August 2026

- Combined AI research, sales, and implementation leadership at a custom software development firm. Owned architecture, project planning, client communication, development leadership, hands-on engineering, and production deployment.
- Built AI-assisted development tools and LLM applications using spec-driven agent execution, deterministic retrieval, and independent verification of generated work.
- Connected applied AI research to reusable tools, including Forge and Corpus Council, and explained AI development methods through public demonstrations and technical talks.

Nevo Technologies | Principal and Account Executive

August 2021 to March 2025

- Owned custom software engagements from lead sourcing and discovery through scoping, architecture, development, delivery, and client relations.
- Across Nevo roles, closed more than $2.3 million in engagements over four years while remaining hands-on in software delivery.
- Led modernization work and built APIs, data pipelines, and migration tooling connecting modern applications with legacy systems across insurance, healthcare, and logistics.
- Managed customer-facing troubleshooting and production issue resolution across databases, distributed systems, and third-party integrations.

Workstorm | Technical Lead

March 2018 to March 2021

- Led the build-out of a UI platform across desktop, mobile, and web for a privacy- and security-focused enterprise collaboration product, including a shared component architecture.

Buddy Lee Technology LLC | Founder

May 2015 to February 2018

- Owned customer conversations, architecture, implementation, delivery, and roadmap for consulting and application-platform work.
- Built BlissUI, a visual application development platform compiling user-created applications to React, with a custom tree data structure, compiler, runtime, and live editor.

Markel Corporation | Lead Software Developer

March 2011 to August 2013

- Led development of insurance application, rating, and policy management systems using data-driven design.

PhyQuest | Co-founder and Lead Developer

November 2002 to March 2006

- Co-founded and built a healthcare platform for radiology significant-findings follow-up and risk reduction; worked directly with radiology practices.

Additional Engineering Experience

PostHog, Outpace, Datatrac, Devnext, WebMD, Turner Broadcasting, and Quantum Radiology. Work included analytics, shipping logistics, donation management, advertising and A/B testing, member and security services, and a physician portal.

Selected AI and Platform Work

- **Refine | Agentic software delivery system, 2026.** Open-source management layer for coding agents across repositories, branches, and nodes, with governance to keep output aligned with product intent. Built in Rust. github.com/buwilliams/refine
- **Forge | Spec-driven development, 2026.** Claude Code plugin that decomposes goals, scopes agent context, persists task state, and runs implement, verify, and commit loops. An independent verifier checks completed work. github.com/buwilliams/forge
- **Corpus Council | Grounded LLM applications, 2026.** Python API and CLI combining deterministic embedding retrieval in ChromaDB with hierarchical deliberation by configured personas. Supports parallel and consolidated reasoning modes. github.com/buwilliams/corpus-council
- **HarmonicWork | Human and AI workflow orchestration, 2025.** Designed and built a platform modeling people and AI workers within the same skills and DAG workflow system. TypeScript, React, Express, PostgreSQL, and Drizzle. github.com/buwilliams/harmonic
- **AI-assisted T-SQL to Spark SQL conversion.** Built a migration proof of concept with a review workflow and a PySpark verifier that executes converted queries against synthetic data. Public demonstration

Capabilities

- **AI systems:** Agent and subagent orchestration, spec-driven development, retrieval-augmented generation, embeddings, ChromaDB, sentence-transformers, multi-model orchestration, context engineering, and verifier-based correctness checks.
- **Engineering:** Python, TypeScript/JavaScript, React, Node/Express, C#/.NET, SQL, PostgreSQL, Go, and Rust; REST APIs, data transformation, legacy integration, and migration tooling.
- **Delivery:** AWS and Azure, Docker, CI/CD, Git, production troubleshooting, architecture, customer discovery, scoping, and technical communication.
- **Leadership:** AI strategy, technical direction, development leadership, client relationships, sales, and end-to-end delivery in enterprise and regulated environments.

Public Work

Public demonstrations of AI-first development, agent orchestration, and executable verification; essays on AI, knowledge, and economics at buddy-williams.com. Self-taught engineer with extensive applied experience.
